

## Release Notes

Product DualView2

---

**VERSION:** 1.03  
**PART # / CSUM:** 369-8870 / E4A7EA5E  
**COMPATIBILITY:**  
**NEW FEATURES:**

**CHANGES:** **The following changes are included in this release.**  
White in color pallet now set to peak white (100%)  
Increased range of sharpness settings to [-10, 10] (WCP)  
Applied small amount of overscan to video windows to accommodate timing tolerances in broadcast video specs.  
Implemented **InterLaceFIELDRE**verse command to accommodate non-standard interlaced timings

**BUG FIXES:** **The following bug fixes are included in this release.**  
Brightness level incorrect and image was soft at default sharpness setting (0).  
Some YUV formats caused “sparkling” problem  
Window corruption when zooming video inputs  
Possible to use **RECALLCONFIG** from an empty configuration  
After reboot or power cycle **RECALLCONFIG** would not return the saved configuration.  
IP address could change if Hostname was blank (WCP)  
WCP could crash after IP address was changed  
WCP reported incorrect timing values after changing timing with INTM command

**RELEASE DATE** 2/8/07
