

## Release Notes - preliminary

Product                    QuadView XL, DualView XL, Quadra,  
                                  ComputerWall III

---

**VERSION:**                1.07

**PART # / CSUM:**        TBA

**COMPATIBILITY:**      All hardware versions

**NEW FEATURES:**        Self calibration (RGB, UV analog inputs)  
                                  WCP supports record / playback mode for window movements

**CHANGES/FIXES:**      **The following reported problems have been addressed in this release**

Output calibration correct on output #1 only

UDC windows show border on left side of outputs 2,3 and 4

Pink or green tint visible on YUV inputs

PAL window height incorrect in normal mode (OS and US off)

Recalling saved configuration un-calibrates analog inputs

Clearing label leaves label artifact

Changing input source with empty window label causes artifacts in window

Sharpness setting lost when switching between QV and FS

Output blank following power cycle (certain projectors)

Some output timings incorrect ( pixel clock <20 MHz)

Line count instability on interlaced outputs

**RELEASE DATE**        September 24th 2004
